D1 Flatter structure: Workspace → Project → Task

CLICKUP PROBLEM

ClickUp has 5 levels (Workspace → Space → Folder → List → Task). The first screen after setup is an empty “Space” that asks you to add Folders and Spaces before any task exists.

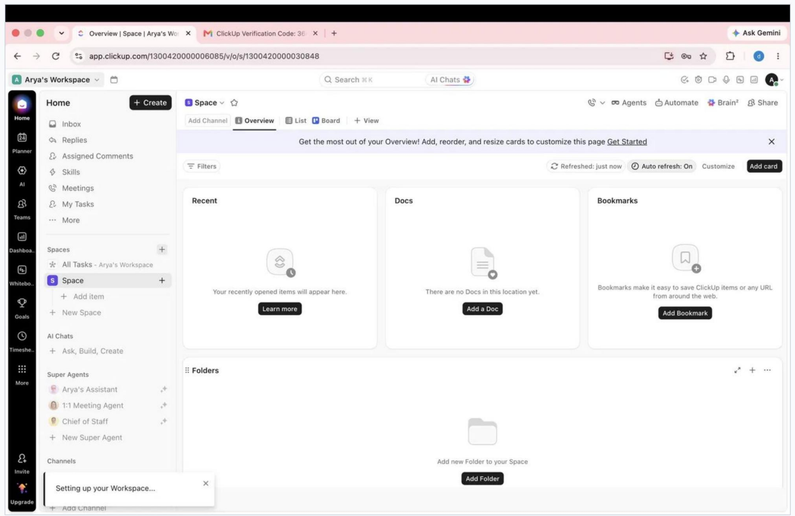

WHAT WE CHANGED

Three levels: Workspace → Project → Task. Home, My Tasks and Calendar sit above projects, so personal views and projects are never mixed up.

WHY IT'S BETTER

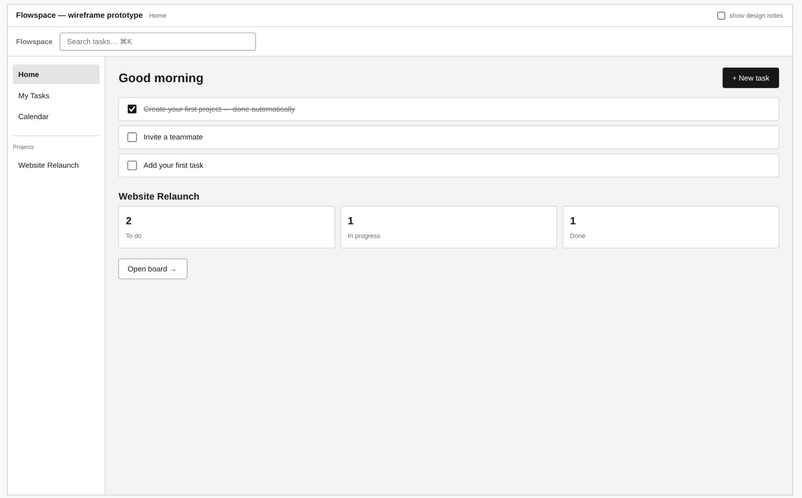

Fewer structural decisions before you can start working. Power users (like Dev) can still add depth later; it just isn’t required up front.

D2 Onboarding: 7 questions → 3 steps

CLICKUP PROBLEM

After sign-up and email verification, ClickUp asks 7 questions with 65 choices (3 + 14 + 12 + 18 + 18), plus invite and naming. Two questions (“How did you hear about us?”, “Tools you use”) change nothing in the setup.

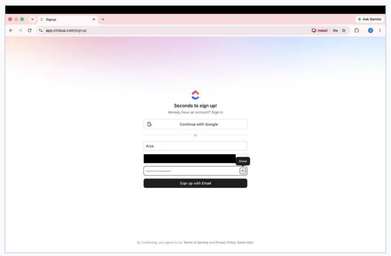

WHAT WE CHANGED

3 steps with 7 answer options in total. Every answer changes the workspace you land in, and step 3 previews it before you create it. The hi-fi sign-up also drops the Name field.

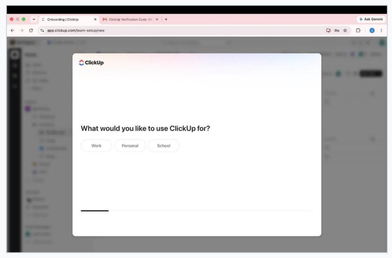

WHY IT'S BETTER

Nothing is asked that doesn’t visibly build something. ClickUp offers 65 choices, then shows an empty Space anyway.

D3 Plain labels instead of jargon

CLICKUP PROBLEM

The sidebar mixes Spaces, Folders, Channels, Super Agents, Skills and AI Chats. The login page asks for a “Work email”, which tells a student this tool isn’t for her.

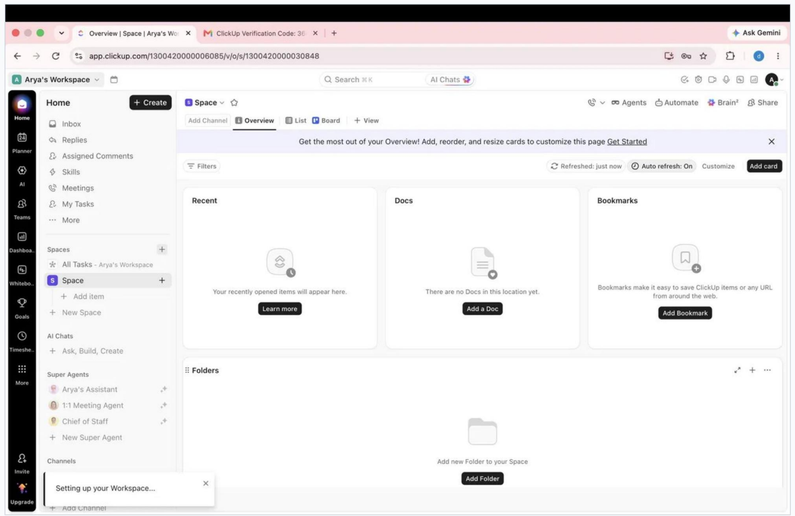

WHAT WE CHANGED

Four plain labels: Home, My Tasks, Calendar, Projects. Sign-in just says “Email”.

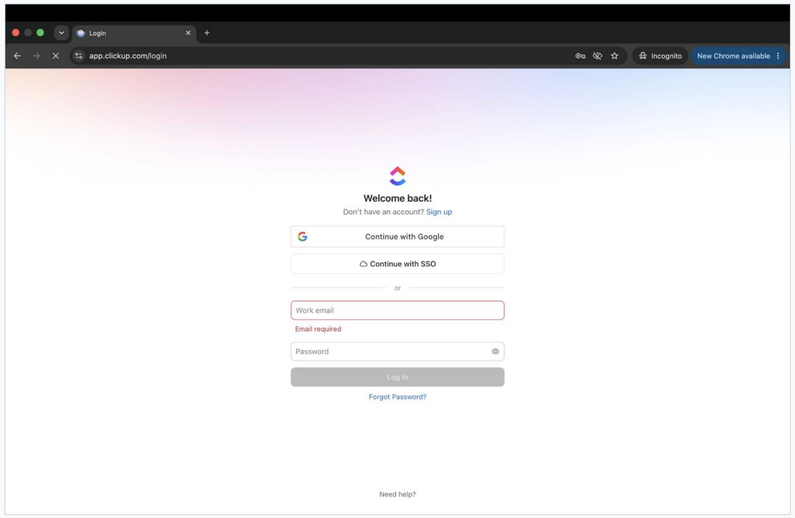

WHY IT'S BETTER

The words match how Priya and Aditi describe their own work, not ClickUp’s internal model.

D4 First-run Home that says what to do next

CLICKUP PROBLEM

You land on an empty Space: four empty cards, no task, six filled buttons of equal weight and a “Setting up your Workspace...” message.

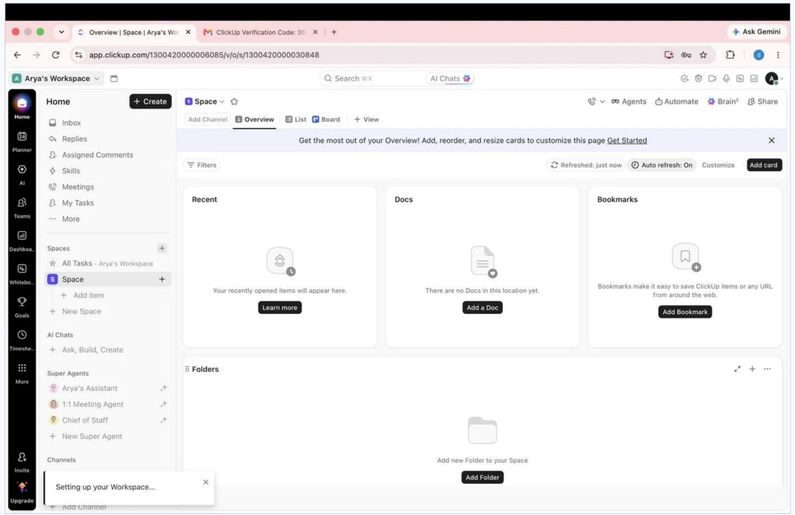

WHAT WE CHANGED

Home opens with one primary action (+ New task), a 3-item Get started checklist and live stats for your project.

WHY IT'S BETTER

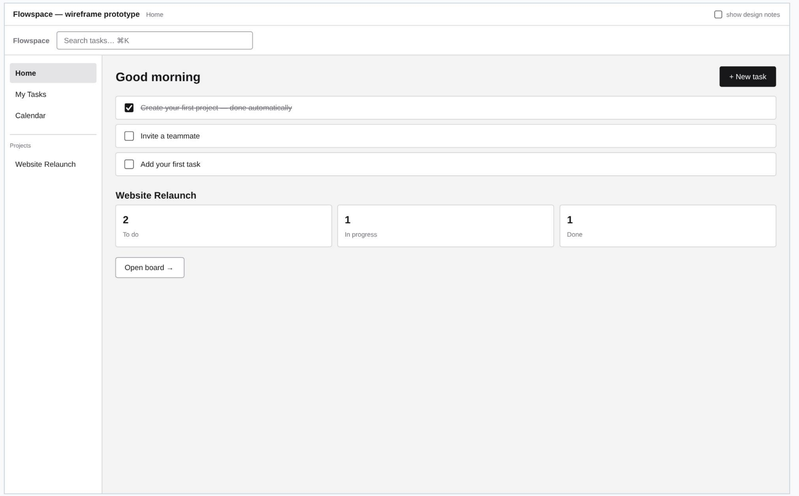

You land somewhere that tells you the next step. ClickUp lands you in an empty room.

D5 My Tasks is one click from anywhere

CLICKUP PROBLEM

The simple path, ClickUp's Personal List, only appears after you expand My Tasks in the sidebar, nested under "Assigned to me" and "Today & Overdue". Nothing on the first screen points to it.

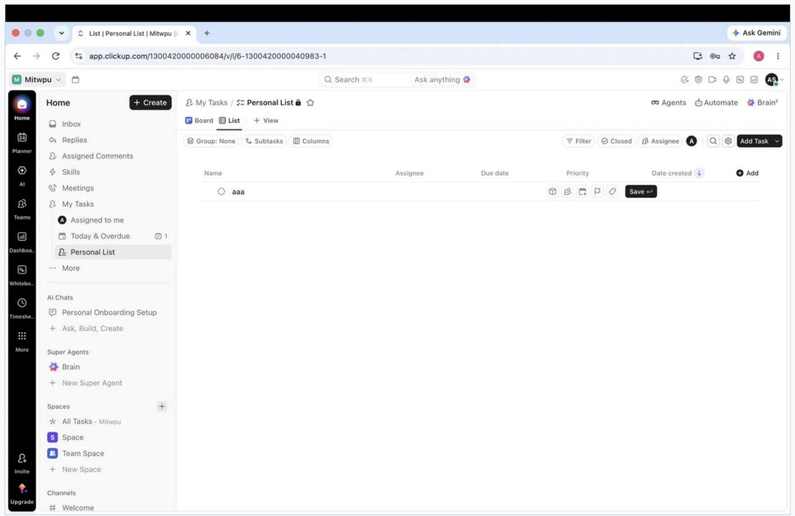

WHAT WE CHANGED

My Tasks is a top-level nav item that lists everything assigned to you across every project.

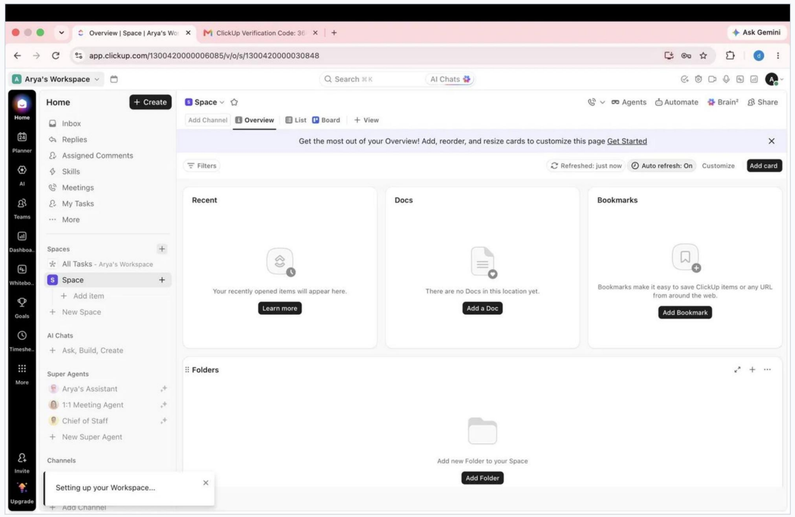

WHY IT'S BETTER

Removes a confirmed discoverability gap: Aditi's biggest blocker.

D6 Task fields kept the same (not a flaw)

CLICKUP PROBLEM

Not a flaw. ClickUp’s task-creation panel already has sensible defaults: name, assignee, due date, priority, status and “more”.

WHAT WE CHANGED

We kept the same default fields, in the same order, in both the create and the detail views.

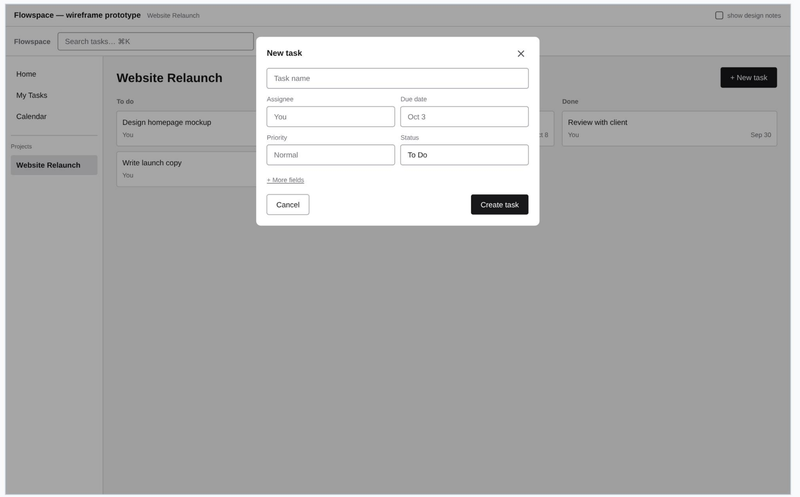

WHY IT'S BETTER

We didn’t fix what wasn’t broken. Nothing new to learn between creating and viewing a task.

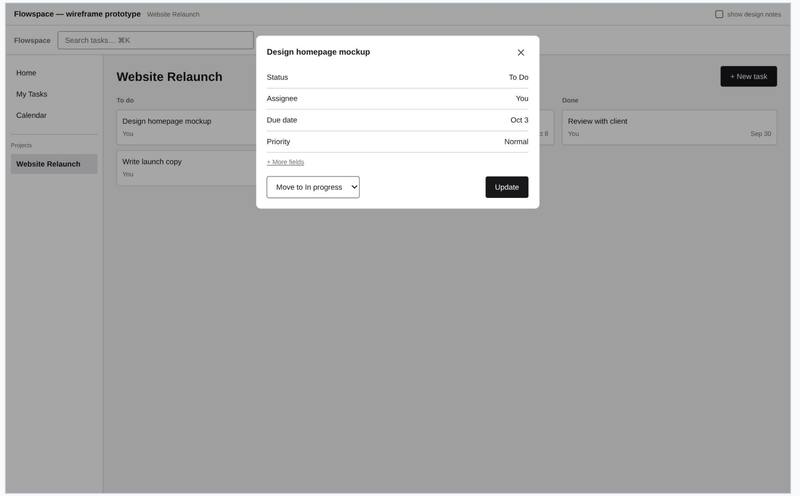

ClickUp (as-is)

No ClickUp screenshot needed: this change keeps ClickUp’s existing default fields.

D7 One filled button per screen

CLICKUP PROBLEM

On the first landing, six filled black buttons compete (Create, Learn more, Add a Doc, Add Bookmark, Add card, Add Folder). The plan pop-up makes the paid trial the filled button.

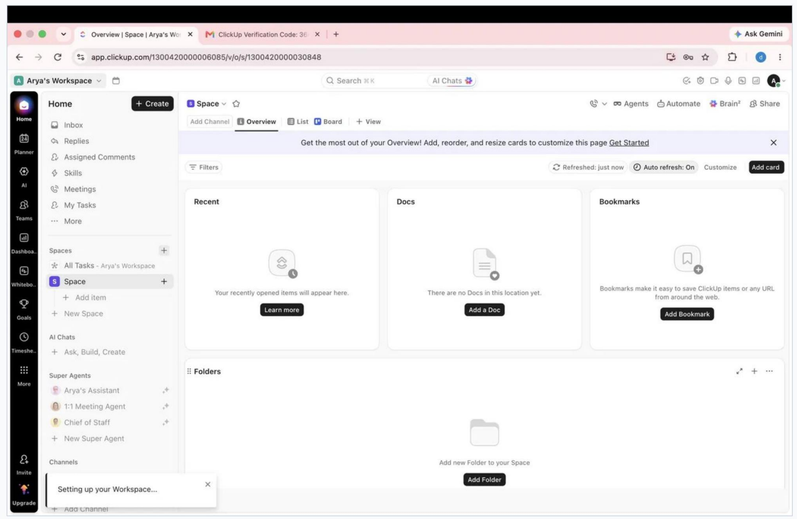

WHAT WE CHANGED

Every screen has exactly one filled (primary) button. Everything else is outlined or a text link.

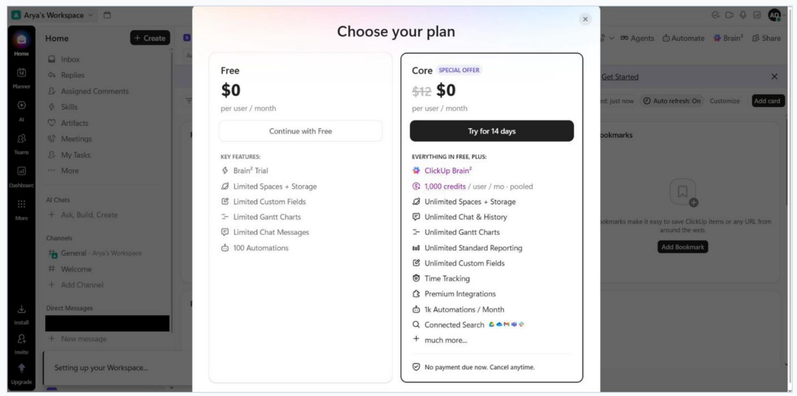

WHY IT'S BETTER

The next step is always obvious, and the rule can be checked on every screen of the hi-fi.

D8 Progressive disclosure

CLICKUP PROBLEM

"Overwhelming interface": about 930–940 G2 mentions across 3 related tags. Setup alone asks you to scan 18 features and 18 tools.

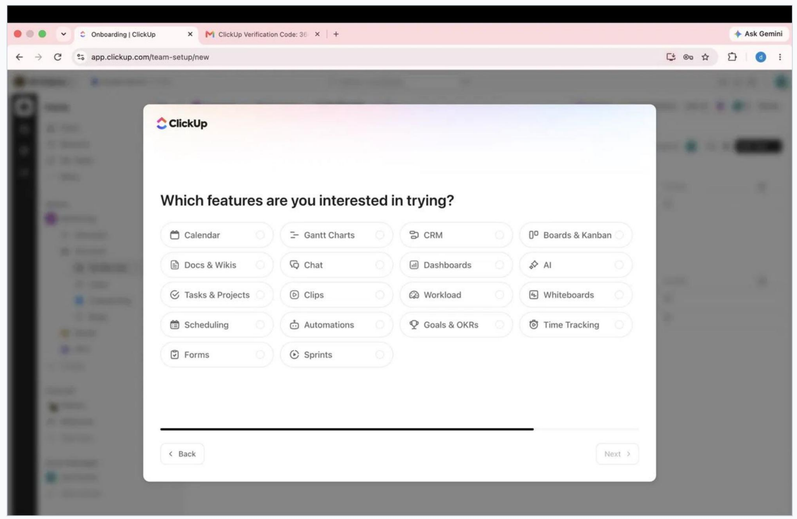

WHAT WE CHANGED

Only the default fields are visible. Extra fields (project, description) stay behind "+ More fields".

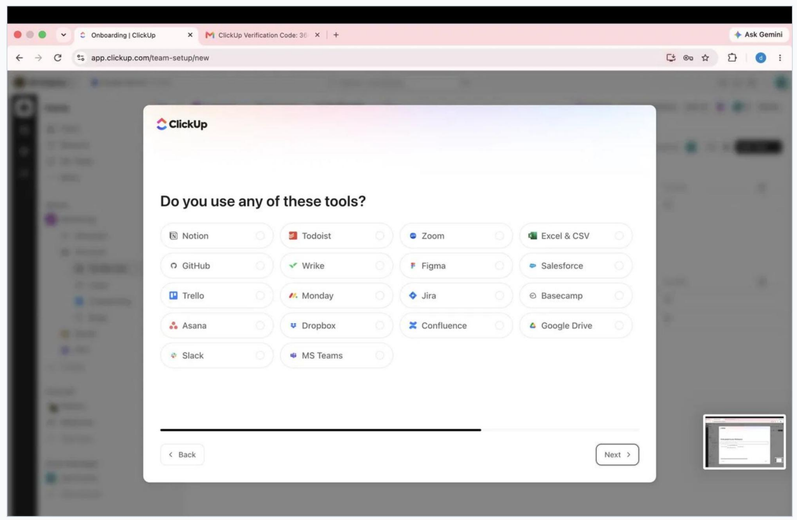

WHY IT'S BETTER

The depth is still there, just not dumped on the first screen.

x Named exclusions and unchanged steps

CLICKUP PROBLEM

Pricing pop-up right after setup pushes a paid trial before Aditi understands what she'd pay for. Email verification and the login page are standard.

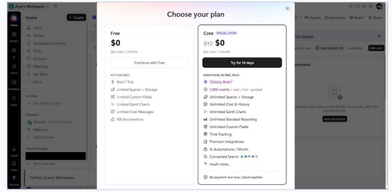

WHAT WE CHANGED

Pricing and upgrade prompts are excluded (a business decision, not an interface one). Email verification is kept as-is for security. Sign-in mirrors ClickUp's login with plain labels.

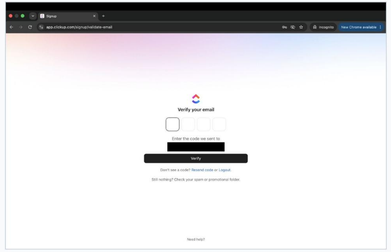

WHY IT'S BETTER

Scope stays honest: these are named, not silently skipped.
